**VOLUME XII – NUMBER 32
Friday, April 25, 2003**

**UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL MARKETING SERVICE
FRUIT and VEGETABLE PROGRAMS, MARKET NEWS BRANCH**

PREFACE

This report is produced by the United States Department of Agriculture with the cooperation of Agriculture Canada and Servicio Nacional de Informacion de Mercados of Mexico. It is published twice weekly and includes preliminary import volume data which is subject to correction as final data are received. Prices as shown for Bulgaria, Canada, Colombia, England, France, Germany, Japan, Mexico, The Netherlands and Poland are converted to U.S. currency, based upon the published New York foreign exchange rate as quoted at 3 p.m. Eastern Time on the date of the information shown.

The preliminary volume data as shown in the shipment, border crossings and import section are by commodities and origins on a crop season basis. Seasons commence with the first shipments of a new crop with most commodities having a different shipping period per origin. For additional information or a subscription notice, contact the following office.

The U.S. Department of Agriculture's Agricultural Marketing Service is not responsible for the accuracy of the Foreign Wholesale Markets contained in this report. The Agricultural Marketing Service does believe that the sources of this price data, both government and non-government agencies, have the most reliable and complete information available. These reports are included as a service to provide as many Foreign Wholesale Markets as possible to users of The International Report.

COMMODITY HIGHLIGHTS

MEXICAN TRENDS

For the week of April 14 - 18, 2003

CITRUS FRUITS

Limes

Harvesting of Mexican limes in Apatzingan, Michoacan is no longer in its low phase, associated with winter, and now that it's spring, shipments have continued to improve. Furthermore, production in the regions of Colima and Oaxaca also appears to be recovering, which is why overall supplies have improved within the past month. Consequently, the price has been dropping, reaching a level that is quite affordable, yet higher than it was a year ago, since consumption tends to rise during the Holy Week festivities. Although the price is expected to stabilize, it could drop again during the month of April.

Contrary to this, supplies of Persian limes have diminished because export levels from Martinez de la Torre, Veracruz have increased, even though they usually tend to be at their highest during the months of January through March. Furthermore, the low phase of production in that region still hasn't ended. As a result of this, the price has risen slightly, reaching a level that is now higher than that of the sour lime, a situation that isn't at all common. Despite all this, once Lent is over, consumer demand is likely to diminish and this could allow the price to either stabilize or even start falling.

Oranges

The price of Late oranges – which happens to be the best in quality of its kind – has risen slightly now that harvesting in Veracruz is in decline and because lower volumes have been yielded this past cycle. Furthermore, consumption appears to have risen during the hotter and sunnier days noted. Despite all this, the price is still affordable which is why it will probably rise again within the next two weeks. It is important to mention that batches of the Mayera variety are also coming from the same region, however these are poorer in quality which is why they are priced lower.

MELONS

Cantaloupes

Domestic supplies of Cantaloupe melons have remained relatively satisfactory and shipments arrive regularly now that Altamirano, Guerrero is the primary wholesale supplier, with batches also constantly coming from Michoacan, Colima and Nayarit. However, contrary to expectations, consumption has dwindled which is why the price has dropped. Despite all this, the price still happens to be high because supplies of the good quality ones are scarce and only happen to be coming from the first region where harvesting is now in its final phase. Although the demand may not rise significantly within the next two weeks, the price will probably remain somewhat stable.

Watermelons

As for Sangria watermelons , without necessarily being abundant, shipments have been both constant and sufficient. The price, however, has risen slightly on account of the higher temperatures in the City of Mexico, stimulating consumption. Despite all this, the price is actually affordable and only slightly higher than it was a year ago, and it will probably remain this way throughout the next two weeks since shipments from Campeche, a primary supplier, as well as from Quintana Roo and Veracruz, which supply lower volumes, are expected to be similar.

NON-CITRUS FRUITS

Apples

Domestic supplies of apples have remained consistent since shipments tend to be regulated and because the bulk of them happen to be coming from refrigerated storage facilities, predominantly imported from the United States. This is why supplies have remained consistent within the past few weeks, although the prices are higher than they were a year ago because of the import duties assessed and the cost of distributing them throughout the country.

Avocados

Supplies of Hass avocados have remained both constant and satisfactory and harvesting in Michoacan is still at its peak, and even though consumer demand tends to rise during Holy Week, the price hasn't changed significantly. Throughout the rest of April, similar quantities are expected to be shipped to domestic markets which is why no significant changes are likely to be noted in the price.

Bananas

After three weeks of continuous lows, the price of the Tabasco bananas has risen slightly, behavior that has to do with the fact that production in Chiapas and Tabasco has diminished slightly on account of the diminished humidity levels consistent with the drought period. During the next coming week, the price is expected to remain stable since consumption tends to dwindle during the school break period.

Without being overly abundant, supplies of Macho plantains happen to be enough to meet the current market demand. This situation has prompted the price to drop slightly, reaching a level that is affordable. With shipments coming from Chiapas, Veracruz, and Oaxaca, supplies are expected to remain steady enough to maintain the price stable during the next fifteen days.

Papayas

Shipments of Maradol papayas, which are the ones coming from Veracruz' final crop, have been both consistent and considerable, in terms of volume. Furthermore, constant shipments have been coming from Oaxaca, though lower in volume, and together, they make overall supplies satisfactory. As a result of this, the price of the better quality product hasn't changed and still happens to be affordable, yet higher than it was a year ago. Throughout the rest of April, shipments from the first region are expected to be considerable, at least enough to avoid significant increases in the price.

Pineapples

As predicted, supplies of pineapples appear to be relatively satisfactory because at this time of the year, production tends to be at its highest in Villa Isla, Veracruz, the traditional supplier to the Federal District. Despite all this, less crop surface was planted which is why volumes are lower than they were in 2002 and even though the price is somewhat affordable, it's still higher than it was a year ago. During the next two weeks, production could reach its peak and this could prompt the price to drop slightly.

VEGETABLES

Carrots

Now that the weather in Celaya, Guanajuato has improved, the development of carrots has been better – this being the primary wholesale supplier during the first quarter of the year – and with increased harvesting activity, supplies have naturally increased. This has prompted prices to drop although they're comparatively higher than they were a year ago. This is because lower volumes have been yielded and crops have been affected by adverse conditions such as freezing weather and extemporaneous rains. Despite all this, production tends to be at its peak at this time of the year and supplies could remain consistent which is why no significant changes are likely to be noted in the prices during the next coming week. However, this will depend on whether or not harvesting is suspended during the Holy Week festivities.

Pepper

During the past two weeks, the price of prime quality Serrano peppers has risen significantly – behavior that had to do with the fact that shipments from Sinaloa are diminishing now that harvesting in that region is ending, and, secondly, because only limited quantities are coming from Tamaulipas, Jalisco and Nayarit. Despite all this, the price is still affordable and will probably remain somewhat stable during the next two weeks given the fact that the demand appears to be dwindling.

With respect to Poblano peppers, supplies are ample now that significant shipments are still coming from Sinaloa, along with the ones coming from Jalisco, and some batches that are coming from Southern Baja California. Although consumption has been higher during Lent, the price hasn't varied all that much and it'll be necessary to wait and see whether it changes because up until now supplies have remained consistent. Despite all this, it actually depends on harvesting and distribution activities and whether or not they are affected in any way during the holiday period.

As for Jalapeño peppers, domestic supplies appear to have diminished a bit within the past two weeks because, on the one hand, harvesting is ending in Sinaloa, while volumes coming from Jalisco – the current primary supplier – as well as from Tamaulipas and Nayarit, aren't all that ample. Because of this, the prices have risen slightly, particularly that of the large-sized ones, which are used for stuffing. Despite all this, the average price is still affordable and happens to be lower than it was a year ago and when Lent ends, consumption will probably diminish somewhat which is why the price will most likely stabilize.

Squash (Zucchini)

During the past month, the price of prime quality zucchini has behaved erratically on account of the fluctuations noted in the supply levels. During the past week, volumes from Puebla and Hidalgo diminished, while those from Oaxaca have been sporadic. Because of this, the price has risen slightly, yet it still happens to be affordable and will probably remain somewhat stable, or even drop within the next two weeks, particularly if the weather in those regions happens to remain favorable towards the development of the crops and since the demand doesn't appear to be all that high at the moment.

Tomato

Up until now, the supply of Saladette tomatoes has been sufficient, in general, since consistent shipments have been coming from Sinaloa where harvesting is in its secondary phase, and some regular, yet smaller, shipments are also coming from Nayarit. Because of this, the price of the prime quality ones hasn't varied all that much and still happens to be affordable, and in all likelihood will remain this way throughout the next two weeks considering that production in the first region will last throughout the rest of the month, unless growers decide to reduce cutting activities or distribution ceases during Holy Week festivities.

In the meantime, volumes of vineripe tomatoes being exported aren't all that significant which is why domestic supplies happen to be sufficient enough to meet the current market demand. Likewise, the price of the better quality ones has remained both stable and affordable since the demand for this variety isn't all that high. During the next coming week, few variations are likely to be noted in the price, however this will depend on whether harvesting and distribution activities are affected by the vacation period.

ONIONS AND POTATOES

Onions

Actually, significant quantities of white onions are coming from Tamaulipas, where harvesting is now at its peak, along with batches that are coming from Guanajuato and Morelos. Because of this, the price of the prime quality ones has remained affordable, although it has risen slightly reaching a level that is now higher than it was a year ago when supplies of this crop were abundant. It is important to mention that during the next coming week, volumes shipped, as well as the price, are likely to remain stable, unless Holy Week festivities happen to affect harvesting and distribution activities drastically.

Potatoes (White)

The price of prime quality white potatoes has remained high, as it has been for the past month, given the fact that only Los Mochis, Sinaloa is supplying them at the moment and production in that region is in its final phase, and secondly, because growers are regulating extraction and distribution, storing some quantities because Leon, Guanajuato's crop appears to have suffered delays on account of the freezing weather that occurred in March. Additionally, demand has risen during the Holy Week festivities. Because of all this, the price has reached a very high level, and it will probably remain somewhat stable during the next two weeks since consumption will likely diminish after the religious festivities.
